

Bug: Order Type list displayed incorrectly

#### Description

The Order Type list is displayed even when there is only 1 active type that considers an order.

#### Expected Behavior

- With only 1 valid Order Type:
  - Do not display the list/button
  - Apply the type automatically

#### Actual Behavior

- The list/button of Order Type is displayed

#### Evidence

The method below correctly identifies when there is only one valid type, but its result is not being applied in the UI:

```
temApenasUmTipoPedidoDisponivel()
```

## **Android – Key-Value "Hide Products without Pronta Entrega Stock" hiding PRODUCTS WITH STOCK**

### **Regression**

#### **CT-01 — Display of the Order Type Button**

##### **Validation Rule:**

The Order Type button should appear before the branch filter when the stock control is Pronta Entrega or when at least one order type has Pronta Entrega.

##### **Preconditions:**

- Company with Pronta Entrega stock control  
or
- Company with another control, but at least one order type configured as Pronta Entrega

##### **Steps:**

1. Open the Android app
2. Access the Products screen (simple)

##### **Expected Result:**

- The Order Type button is displayed before the branch filter

##### **Actual Result:**

- Order Type button displayed correctly before the branch filter

**Status:** Approved

---

## **CT-02 — Recalculate Stock when Selecting Order Type**

### **Validation Rule:**

When selecting an order type, the stock should be recalculated according to the chosen type.

### **Preconditions:**

- Two active order types with distinct stock controls

### **Steps:**

1. Select Order Type A
2. Check the displayed stock
3. Select Order Type B

### **Expected Result:**

- Stock is recalculated when switching the order type
- Product list updates according to the selected type

### **Actual Result:**

- Stock recalculated correctly when switching types
- Product list updated according to the selected type

**Status:** Approved

---

## **CT-03 — Display of Branch Filter**

### **Validation Rule:**

When the order type has stock control by branch, the branch filter should be displayed.

### **Preconditions:**

- Active order type with branch stock control

### **Steps:**

1. Select the order type with branch control

### **Expected Result:**

- Branch filter is displayed
- Stock recalculated according to the selected branch

### **Actual Result:**

- Branch filter displayed correctly
- Stock recalculated according to the selected branch

**Status:** Approved

---

## CT-04 — Persistence of Order Type (Preferences)

### Validation Rule:

The selected order type should be saved and restored when reopening the Products screen if the control is Pronta Entrega.

### Preconditions:

- Stock control configured as Pronta Entrega
- More than one active order type

### Steps:

1. Select an order type
2. Exit the Products screen
3. Return to the Products screen

### Expected Result:

- Previously selected order type is restored
- Product list remains correctly filtered

### Actual Result:

- Order type restored correctly
- Filter maintained according to the saved type

**Status:** Approved

---

## **CT-05 — Saved Type Nonexistent or Inactive**

### **Validation Rule:**

If the saved type is inactive or does not exist, the system should automatically select the first valid type marked "Considers Order".

### **Preconditions:**

- Order type previously saved in preferences
- Saved type deactivated in backoffice

### **Steps:**

1. Open the Products screen (simple)

### **Expected Result:**

- The first valid order type is automatically selected
- No error or empty list occurs

### **Actual Result:**

- Valid type automatically selected
- Product list displayed normally

**Status:** Approved

---

## CT-06 — Scenario with Single Order Type and Pronta Entrega

### Validation Rule:

When there is only one active order type with Pronta Entrega stock control, the Order Type button should not be displayed.

### Preconditions:

- Only one active order type
- Type configured with Pronta Entrega stock control

### Steps:

1. Open the Products screen (simple)

### Expected Result:

- Order Type button is not displayed
- Type applied automatically
- Products filtered correctly

### Actual Result:

- Button not displayed
- Type applied automatically
- Products listed correctly

**Status:** Approved

---

## **CT-07 — Direct Display of Stock in Product List**

### **Validation Rule:**

In the single type with Pronta Entrega scenario, stock should be displayed directly in the list in the format “**Stock: X UN**”.

### **Preconditions:**

- Scenario with only one order type
- Pronta Entrega stock control

### **Steps:**

1. Open the Products screen (simple)

### **Expected Result:**

- Stock displayed directly in the product list
- “**View stock**” button is not displayed

### **Actual Result:**

- Stock displayed correctly in the format “**Stock: X UN**”
- “**View stock**” button not displayed

**Status:** Approved

---

### **Conclusion of Testing**

All tested scenarios behaved as expected.  
Implementation fully meets the rules defined in the task.

**Final Status:** Approved
